IP Allow List

IP Address Restrictions

The TempWorks Open API validates the IP address of each request when using OAuth bearer tokens. Companies wishing to use OAuth must provide TempWorks with a range of IP addresses that their requests will originate from. The IP range(s) can be provided in a variety of IPv4 formats:

- Single IP "1.1.1.1"
- IP Range "1.1.1.1-1.1.1.20"
- IP Range (shorthand) "1.1.1.1-20"
- CIDR "1.1.1.1/20"
- Network/Mask "1.1.1.1/255.255.255.20"

Note Any requests that come from outside the configured range will receive a response with an HTTP status code of 403 and an error message of "Request blocked due to invalid IP Address".
